

Internship Report Of **Artificial Intelligence Internship**

Submitted

To

School of Computer Science and
Engineering IILM University,
Greater Noida, U.P.

In partial fulfilment of the requirement of degree of
B.Tech CSE

By

Roll Number of Student: 2410031633

Name of Student: priyam kumar

Batch: 2024-28

CANDIDATE'S DECLARATION

I, Priyam kumar do hereby declare that the internship report titled “**Artificial Intelligence**” has been completed by me to fulfil the requirement for the award of the degree of Bachelor of Technology in CSE. All the references have been quoted and I have not taken as such any material from any other source. I affirm to you that this report is my own and has not been submitted to any other institute for any degree/diploma requirement and further I shall be solely responsible for any kind of copyright violation in this regard.

Roll No. 2410031633

ACKNOWLEDGEMENT

I am using this opportunity to express my gratitude to everyone who supported me throughout the Internship Program. I am thankful for their aspiring guidance, invaluable constructive criticism and friendly advice during this work. I am sincerely grateful to them for sharing their truthful and illuminating views on a number of issues related to this work. I express my gratitude to my parents for their blessings.

Internship Completion Certificate

CERTIFICATE OF INTERNSHIP

This certificate is awarded to
Priyam Kumar

From Codec Technologies Pvt. Ltd.

In recognition of his/her efforts and achievements in completing the 1 Month AICTE & ICAC

Approved internship program as

Artificial Intelligence Intern

Conducted from 04/06/2026 to 07/07/2026

AICTE ID - CORPORATE6759d549ce59e1733940553

A handwritten signature in black ink, appearing to read 'Anurag', positioned above a horizontal line.

Dr. Anurag Shrivastava
Program Manager

4. PROJECT DESCRIPTION

4.1 Introduction

Artificial Intelligence (AI) means teaching computers to make decisions or predictions on their own, using data, instead of following fixed instructions written by a programmer. As part of the B.Tech CSE curriculum, students are encouraged to complete short industry internships to get exposure to real AI tools alongside classroom study.

This report covers the one-month AICTE & ICAC approved internship completed as an Artificial Intelligence Intern at Codec Technologies Pvt. Ltd., from 11/06/2026 to 11/07/2026. The internship introduced basic AI and Machine Learning concepts using Python, and included a small practical project to apply these ideas.

The project chosen for this report is a simple and well-known beginner AI project called Iris Flower Classification, where a program is trained to guess the species of a flower just by looking at its measurements (like petal length and width).

4.2 Organization Profile

Codec Technologies Pvt. Ltd. is a training organization that offers short, AICTE and ICAC approved internship programs to engineering students in fields like Artificial Intelligence, Python, Data Analytics, and Cloud Computing. The internships are conducted online and are partnered with the National Internship Portal (Ministry of Education).

Table 4.1: Organization Profile Details

Particular	Details
Organization Name	Codec Technologies Pvt. Ltd.
Program	1-Month Artificial Intelligence Internship
Approval	AICTE & ICAC Approved
Mode	Remote / Online

Duration	11/06/2026 to 11/07/2026 (1 Month)
Program Manager	Dr. Anurag Shrivastava

4.3 Problem Statement

It is hard for a beginner (or even a machine) to identify the exact species of a flower just by looking at it. But if we measure certain parts of the flower, like the length and width of its petals and sepals, a pattern can be found.

The problem this project solves is simple: can a computer program look at these four measurements and correctly guess which of three flower species (Setosa, Versicolor, or Virginica) it belongs to?

4.4 Project Objectives

- To understand basic AI and Machine Learning ideas in a simple, practical way.
- To use a small, ready-made dataset (Iris dataset) to train a simple model.
- To teach a computer program to classify flowers based on their measurements.
- To check how accurate the program's guesses are.
- To get hands-on experience with basic Python AI tools.

4.5 Scope Of Project

This project only works with the Iris flower dataset, which is a small, simple, and commonly-used beginner dataset. It does not involve images, only numbers (measurements). The project is kept simple on purpose, matching the level of a one-month beginner internship, and is not meant to be a large real-world product.

4.6 Technologies and Tools Used

Table 4.2: Technologies and Tools Used

Category	Tools / Technologies
Programming Language	Python 3
Data Handling	Pandas, Numpy
Machine Learning Library	Scikit-learn
Visualization	Matplotlib
Development Environment	Jupyter Notebook / Google Colab
Dataset	Iris Flower Dataset (built into scikit-learn)

4.7 System Architecture

The project follows a very simple, easy-to-follow flow, shown below:

- Step 1 - Data: Get the flower measurement data (already provided as a dataset).
- Step 2 - Clean Data: Organize the data so the computer can read it properly.
- Step 3 - Train Model: Show the computer many examples of flowers with known species, so it can learn the pattern.
- Step 4 - Test Model: Give the computer new, unseen flower measurements and check its guesses.
- Step 5 - Result: See how many guesses were correct (accuracy).

In short: Data → Clean Data → Train Model → Test Model → Result

4.8 Methodology

The internship followed a structured, week-wise methodology combining

conceptual learning, hands-on practice, and a final project, as summarized below.

Table 4.3: Week-wise Internship Methodology

Week	Module	Description
1	Foundations of AI & Python	Introduction to AI, ML, and DL concepts; Python basics; data handling using Numpy and Pandas.
2	Core Machine Learning	Core ML concepts such as regression, classification, and model evaluation.
3	Deep Learning Basics	Introduction to Deep Learning models and neural networks.
4	Final Project	Applied the concepts learned to build and test the Iris Flower Classification project using the KNN algorithm.

Step 1: Load the Data - The Iris dataset was loaded, which has 150 flower samples, each with 4 measurements (sepal length, sepal width, petal length, petal width) and a label (flower type).

Step 2: Split the Data - The data was split into two parts - most of it (about 80%) was used to teach the model, and the rest (20%) was kept aside to test it later.

Step 3: Choose a Simple Model - A simple and beginner-friendly algorithm called K-Nearest Neighbors (KNN) was used. It looks at a new flower and checks which known flowers it is 'closest' to in terms of measurements, then picks that species.

Step 4: Train the Model - The model was trained (shown the training data) so it could learn the pattern between measurements and flower species.

Step 5: Test and Check Accuracy - The trained model was tested on the unseen data, and the number of correct guesses was calculated as a percentage (accuracy).

4.9 Expected Outcomes

- A working simple program that can guess the flower species with good accuracy (usually 90%+ for this dataset).
- Basic understanding of how a Machine Learning model is trained and tested.
- Hands-on practice with Python, Pandas, and Scikit-learn.
- A clear, simple example that helped understand core AI/ML ideas taught in the internship.

4.10 Certificates of completion and other communication mail proof must be attached

The certificate for successful completion of the 1-Month Artificial Intelligence Internship (11/06/2026 to 11/07/2026), awarded by Codec Technologies Pvt. Ltd. under the AICTE & ICAC approved National Internship Portal program, is attached below. Any related confirmation e-mails or communication received from the organization regarding registration, task submission, or certificate issuance may also be attached here as additional

INTERSHIP OFFER LETTER

Dear Priyam Kumar ,

We are pleased to offer you a 1 Month Internship as Project Intern at Codec Technologies, a global platform dedicated to empowering learners and connecting diverse talent to create meaningful career opportunities worldwide. Codec Technologies delivers dedicated IT and business consultancy services across 27+ countries, empowering global innovation and strategic growth.

Internship Details:

- Designation : Artificial Intelligence Intern
- Location & Mode: Pan India, Hybrid
- Duration : 04/06/0026 to 07/07/0026
- Reporting to : Assigned Project Head(s)

This program provides an immersive experience, enabling you to gain industry-level knowledge and acquire valuable skills. Exceptional interns may also qualify for a scholarship award based on weekly performance reviews conducted by project supervisor.

If you accept this offer and the terms above, please complete your assigned projects and training tasks on our platform and via email.

Best regards,

Sincerely,

Dr. Anurag Shrivastava,
Codec Technologies India
NCS ID: E19E86-0116588288923
Date Of Issue - 04/06/0026

Dr. Anurag Shrivastava
Talent Acquisition Manager
